

Mazda 6 -How To Fit A Door Mirror

Tools needed : An 8mm socket with ratchet wrench

Phillips Head screwdriver

Flat Head Screw driver

Method :

The first priority is to remove the door trim to give you access to the hidden wiring that controls the electric mirror

Remove trim piece in grab handle by levering with screwdriver then remove two screws

Remove light cover with firm pulling action and undo one screw inside

Remove inner handle screw cover by prying with flat head screwdriver and undo one screw

Remove inner mirror cover containing tweeter speaker by firm pulling action

Remove door trim with firm pulling action starting at the bottom using the lower pocket as leverage

Remove now exposed wiring fitting to mirror

Remove mirror by unscrewing three 8mm head size screws

Support mirror and remove

To refit repeat above steps in reverse

For refitting pay attention to the following

Slid door trim back on from the top first sliding down firmly on the glass

Firmly use palm of hand to tap the clips of door trim on edges back in place
