

How to Install Rear Struts to a Mazda 323 Astina SP20

Tools required

claw pliers

17mm spanner and ratchet with 17mm socket

flat head screw driver

14mm socket

jack and wheel brace

car stands

Easy Install Guide

Open the rear hatch to gain access to the inner trims

There will be clips holding the trims together

Place flat head under the centre of the trim clip

Pop out centre of clip and pull full clip out of trim

Under the inner trim panels are the top three 14mm nuts that hold the rear struts in place

Undo the three top nuts to the struts completely

jack rear of motor vehicle up

remove rear wheels

remove clip holding brake line to strut

then undo two 17mm nut and bolt holding the suspension strut to the wheel hub

slide bolts out supporting strut and remove old strut complete with body and spring of strut

repeat above procedure to install new rear suspension struts

all work can be completed with one hour
